

Military Dashboard

Module 7: Testing and Debugging – Summary Report

Objective

To validate the functionality, accuracy, and stability of the Military Dashboard by testing all filters, parameters, navigation, data values, tooltips, labels, and layout prior to final delivery.

Testing Scope

- Dashboard loading and performance
- Filters and filter combinations
- Parameters
- Dashboard and page navigation, including navigation buttons
- Charts and visualizations
- Data accuracy (manual spot checks)
- Tooltips
- Titles and labels
- Layout and alignment
- Interactive elements
- Cross-dashboard consistency
- End-to-end functionality

Testing Performed

All items listed within the testing scope were reviewed and tested individually. Filters and parameters were tested both in isolation and in combination. Navigation was verified across all dashboard pages and buttons. Displayed data values were manually spot-checked against source data. Tooltips, titles, labels, and dashboard layout were reviewed for accuracy and consistency. The workbook was also tested for overall responsiveness and performance in Tableau Desktop/Public.

QA Result

Test Category	Status
Filters	Passed
Parameters	Passed
Navigation	Passed
Data Accuracy	Passed
Charts/Visualizations	Passed

Tooltips	Passed
Labels	Passed
Layout	Passed
Interactivity	Passed
Performance	Passed
End-to-End Functionality	Passed

Final Status

All planned functional tests were completed successfully. No outstanding functional issues were identified during final validation.

Status: Ready for Delivery
