

Unified Military Analytics Dashboard

Storyboard Report — Screen Walkthrough

This report documents the four core screens of the Unified Military Analytics Dashboard as a narrative storyboard. Each screen is presented in sequence, showing how a user moves from a high-level global snapshot, into country-level detail, through side-by-side comparison, and finally into coalition-building analysis.

Screen	Purpose
1. Quick Stats	Global overview — headline KPIs and regional breakdowns
2. Nation Overview	Country-level detail with rankings and budget tables
3. Compare Powers	Side-by-side comparison of military strength across nations
4. Coalition Builder	Multi-country data grid for building coalition scenarios

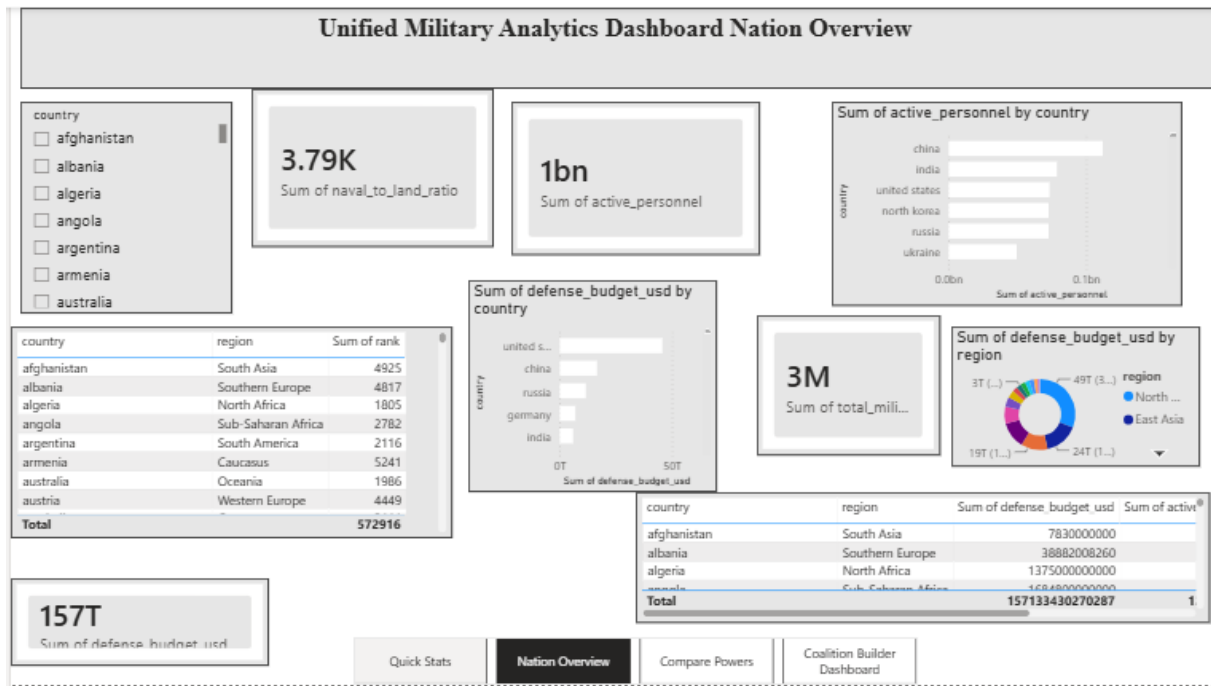

Quick Stats — Global Overview

The landing screen gives a bird's-eye view of the entire dataset. A region filter on the left lets users narrow the scope, while headline KPI cards surface the topline numbers at a glance.

- Countries filter (list of 195), starting with Afghanistan
- 1bn active personnel summed globally
- 157T total defense budget (USD)
- 3M total military aircraft across all nations
- Charts: defense budget by country (bar), by region (donut), and air superiority index by country

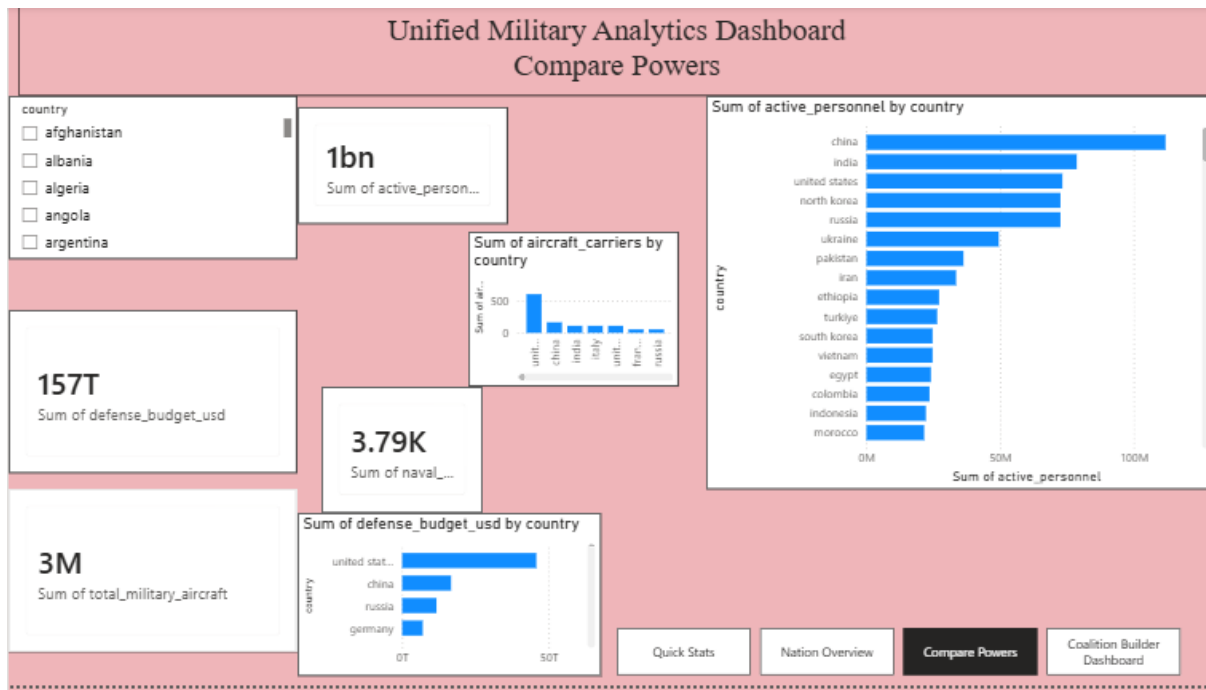

Nation Overview — Country-Level Detail

Drilling in from Quick Stats, the Nation Overview screen exposes country-by-country detail. A sortable data table sits alongside KPI cards, letting analysts move from a global summary to individual nation records.

- 3.79K naval-to-land ratio summed across nations
- Data table with country, region, rank, and defense budget columns
- Active personnel by country chart highlights top spenders: China, India, United States, North Korea, Russia, Ukraine
- Defense budget by region donut, broken out (North America, East Asia, etc.)
- Grand total row: 157,133,430,270,287 in summed defense budget

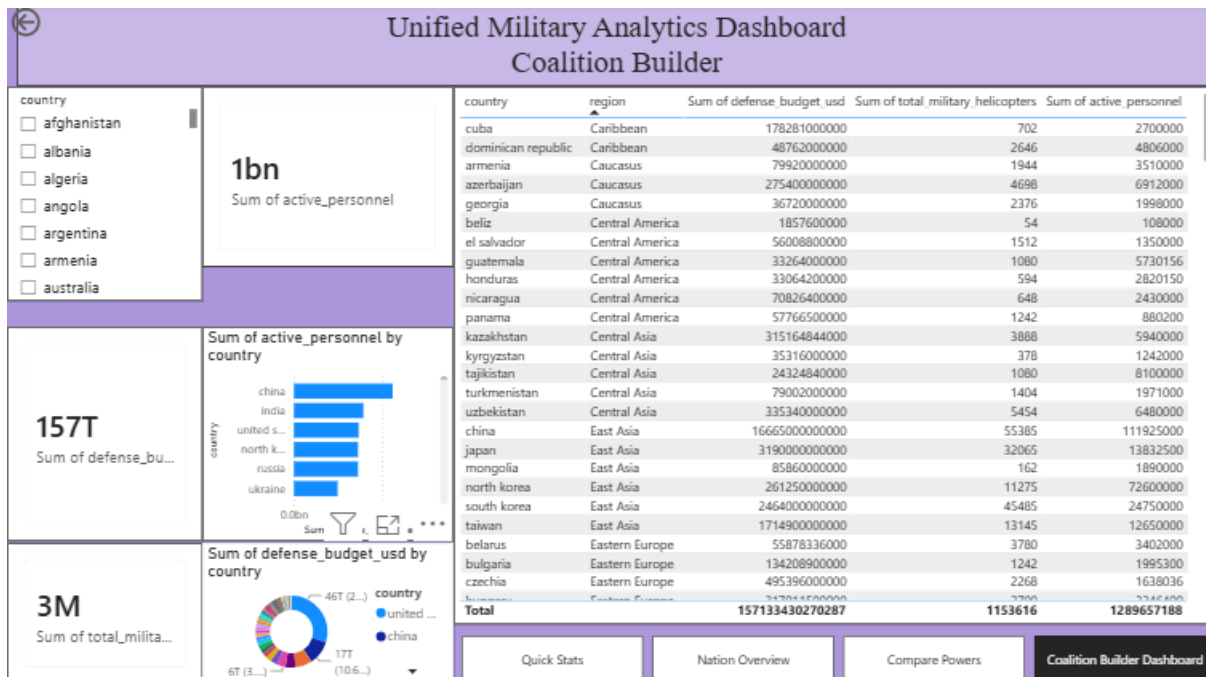

Compare Powers — Side-by-Side Comparison

The Compare Powers screen shifts the narrative from single-country lookup to head-to-head comparison, ranking nations by military scale across multiple metrics in one consolidated view.

- Active personnel by country (horizontal bars): China and India lead, followed by the United States, North Korea, and Russia
- Aircraft carriers by country, with the United States shown as the clear outlier
- Defense budget by country: United States, China, Russia, and Germany at the top
- Same global KPI cards (1bn personnel, 157T budget, 3.79K naval ratio, 3M aircraft) persist for context

Coalition Builder — Scenario Dashboard

The final screen supports 'what-if' coalition analysis. A full multi-country grid (grouped by region — Caribbean, Caucasus, Central America, Central Asia, East Asia, Eastern Europe...) lets users assemble and evaluate combined military strength across any set of nations.

- Detailed table: country, region, defense budget, military helicopters, active personnel
- Example rows: Cuba, Dominican Republic, Armenia, Azerbaijan, Georgia, Belize, El Salvador, Guatemala, China, Japan, and more
- Running totals at the bottom: 157T budget, 1,153,616 helicopters, 1,289,657,188 active personnel
- Same navigation bar (Quick Stats / Nation Overview / Compare Powers / Coalition Builder) confirms this is the final tab in the flow
